Subject: 700 Series Phase II Onboard Refueling Vapor Recovery Release

Franklin Fueling Systems is very pleased to announce the release of our newest Onboard Refueling Vapor Recovery (ORVR) solution, the 700 Series Hanging Hardware solution. The 700 Series provides the most economical solution to meet ORVR compliance with existing Dresser WayneVac and Gilbarco VaporVac equipped vacuum-assist Phase II vapor recovery dispensers.

With its innovative nozzle mounted "Smart Interface" device (no need for a bulky hose mounted sensor and valve) that senses ORVR and Non-ORVR vehicles, the 700 Series solution provides reliable solutions for ORVR compliance without the need for a back-end processor, without the need to modify the dispenser, or the need to replace existing WayneVac or VaporVac vacuum pumps. The Healy Smart Interface Nozzles significantly reduce fugitive emissions at the tank by accurately sensing ORVR vehicles and managing the tank pressure negative. Additionally, the Healy Smart Interface Nozzles reduces forecourt fugitive emission with its Vapor Escape Guard (VEG) and drip-less spout (liquid retention and unintentional spillage). Reduction of fugitive emissions with the Healy Smart Interface Nozzles not only provides a cleaner, safer fueling experience for your customers, but the Healy solutions also provide the highest flow rates in the industry.

The 700 Series is based on the state of the art Healy 800 (Model 708) and Healy 900 (Model 709) Series Nozzles, the 700 Series Nozzle and Hanging Hardware solution will provide the easiest retrofit to ORVR compliance, along with the same high quality and long service life you have come to expect from the Healy product brand. The 700 Series incorporates many common components with existing Healy 800 and 900 equipment, ensuring product availability and ease of ordering. Additionally, 700 Series nozzle repair parts such as spout assemblies will be interchangeable Model 800 and Model 900 Nozzles, facilitating quick repairs and reducing downtime.

For complete details of our 700 Series ORVR Hanging Hardware solution, please contact Franklin Fueling Systems for further information.

Thank you,

Leon Schuster
